## DETAILED ACTION

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent 6,445,707 to luoras et al.

AAPA teaches, with respect to paragraph 2 of claim 6, transmitting ABR ATM data and its associated resources management cells over a satellite (spacecraft). See page 1, lines 18 – 20, and page 2, lines 18 – 20: "Resource management cells are interspersed with the data cells of the ATM source signal." AAPA also teaches, with respect to the last paragraph of this claim, that it is known in the art to mark the resource management cells with information regarding the presence of congestion before distributing them. See page 2, lines 28+. While AAPA does discuss the problem associated with simplistic switching capabilities aboard satellites resulting in their incapability of setting bandwidth control bits (page 4, lines 15 – 20), AAPA does not teach a solution to this problem to comprise determining spacecraft payload congestion data relating to services associated with and including, among others, ABR, and then transmitting this information to the source terminal, as required by lines 22 – 27 of this claim.

Art Unit: 2661

luoras et al teaches a system including a spacecraft which transmits congestion information along a separate link to the terminals. See col 8 lines 30+, col 15 lines 65+, col 16 lines 60+, and the abstract. luoras et al teaches that this is done for ABR traffic 11 "and higher priority traffic" (col 17, lines 27+).

It would have been obvious to one of ordinary skill in the art at the time of the invention to have transmitted congestion information relating to the spacecraft and transmitted it to the source terminal of AAPA in light of the teachings of luoras et al in order to provide a means for reducing congestion along the satellite link portion of the system.

- 3. Claims 1-5 are allowed.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Blount whose telephone number is 571 272 3071. The examiner can normally be reached on M-F 9:00 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Chau Nguyen, can be reached on 571 – 272 - 3126. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
